## New variant of the Internet Worm found.

*A new worm has been detected which spreads through email and chat program in various versions of Windows.*

/24-7PressRelease.com/ - March 10, 2005 - W32/Kelvir-B is an instant messaging worm that spreads by sending a message through Windows Messenger to all of an infected user's contacts. W32/Kelvir-B arrives as an attachment called omg.pif in a message that encourages the recipient to visit a web page to download an update and reads:  
omg this is funny! "http://home.earthlink.net/~GALLERY10/OMG.PIF"

W32/Kelvir-B will attempt to download a file named PATCH.EXE from a remote website and save it as C:patch.exe

The possible side effects are listed below;

1. Sends itself to email addresses found on the infected computer.
2. Downloads code from the Internet and reduces system security.

MicroWorld has listed the new worm at a risk level of "Medium" for now and is in the process of monitoring the same.

For further information please visit the below mentioned link.
