

World's First Real Time Anti-Virus Software Receives Checkmark Certification for 100% Virus Detection

World's first real time Anti-Virus & Content Security software eScan 2003 and MailScan 4 from MicroWorld

How Anti-Virus & Content Security software, eScan 2003 & MailScan 4 are different from other Anti-Virus softwares?

eScan 2003 & MailScan 4 incorporates MicroWorld's Winsock Layer (MWL). MWL tackles virus and worm threats before they reach a computer's applications in Real Time. Moreover, our products quarantine suspicious files on a real time basis, holding them until the next instruction is issued. This ensures system safety and protection even when new viruses strike the system and no remedy is available for them.

With the effectiveness of our Anti-Virus & Content Security Software, one of our products, which is eScan 2003 Internet Security Suite for Windows XP has been awarded the highly regarded Checkmark certification from West Coast Labs (WCL) on October 1, 2003. This verifies that our product can detect and prevent viruses that actually cause infections in the real world. For other Certification, please go to:
