Breaking News

**Microworld enhances eScan range
[Talk Back?](#)**

[CRN Network, Mumbai](#), November 23, 2004

MicroWorld has announced its upgradation of eScan range. eScan now can fight ad ware and spyware running in the background. The new features will be available in eScan version 2.6.518.8 and above.

Spyware is a general term used to describe software that runs on users' computers and performs actions that the consumer considers undesirable or hostile. Some of the most common forms of spy ware are adware, Ad-ware monitors the pages fetched by a user's Web browser or other material on the user's system and when it sees particular pages or terms, it displays other pages containing advertisements paid for by the Spyware's sponsors.

"Although banks have provided the facility of online banking yet people are skeptical of operating their accounts via the Internet. These facts have drawn our attention towards securing our users from not just the havocs of virus/worm attacks but also mal intentions of people trying to intrigue the privacy of Internet Users," said Govind Rammurthy, CEO & MD, MicroWorld.

Along with being compatible with other versions of Windows, eScan is compatible with the latest Windows XP, SP2 as well.

What is your perception about ad ware?
