Author's Description:

MailScan 4 for Avirt is the world's first "Real-Time" eMail Scanner for the Avirt Mail Server. This server is published by Applied Technology Systems Ltd. MailScan for Avirt acts like a Content-Security and AntiVirus Software for your Corporate Avirt Mail Server. MailScan is the **only** product available across the world that transparently works on both SMTP and POP3 traffic. It has the world's first Real-Time eMail Content-Security and AntiVirus that analyzes eMails on a real time basis **before** it is delivered to your clients or servers. Both SMTP and POP3 are supported. Technically, a new layer, called as the MicroWorld Winsock Layer (MWL), has been introduced between the default WinSock2 and the applications. This layer is responsible for analyzing the traffic that flows between Avirt and the Internet or your applications. AntiVirus and Content-Checking are only few of the benefits offered by MailScan. It also has a Generic Attachment Analyzer, Automatic Compression/Decompression feature, a comprehensive Notification engine and hosts of features hitherto found in any other package. MailScan uses the eScan Content-Security and AntiVirus to scan all attachments contained in eMails. Emails sent out to the Internet and coming in from the Internet are scanned and cleaned of Viruses and its contents checked, before your actual email server

processes the same. Multi-threaded process ensures that all emails are parallelly processed. All types of attachments are handled by MailScan, including MIME and UUEncoded. RFC822 attachments, Embedded emails, Multipart-Mixed and Multipart-Digest types are also handled properly. The most important USPs offered by MailScan are that: 1. No port settings or changes need to be done inside Avirt. 2. No Gateway machine needs to be dedicated for using MailScan. MailScan will work along with Avirt on the same machine. Support - 24 X 7 FREE ONLINE support.
