eScan 2003 awarded the highly prestigious Advanced CheckVir Certification

[Security PR Home](#)**MicroWorld Technologies Inc.****Wednesday, June 23, 2004 (Originally Published: 6/22/04)**

eScan 2003 Internet Security Suite (ISS) and eScan 2003 Corporate, were vigorously tested for On-demand and On-Access malicious virus detection and dis-infection. Both the products cleared the stringent CheckVir tests successfully and were awarded Advanced CheckVir Certification. eScan detects malicious viruses and worms before they infect the hard drives and endanger the security of an entire system. With this award, eScan 2003 has confirmed its dominance in the retail and corporate segments, as one of the most powerful products, available for Virus and Content Protection.

All eScan products work on the revolutionary MWL technology enabling them to detect e-threats much before they reach the user's system. Most of the softwares available in the market detect the threat only after it has reached the system of the user and this can cause considerable damage to the IT infrastructure.

Internet, which is considered a fast mode of communication and finding information, has to a great extent made children at home fall prey to unsolicited material. The statistics are astonishing:

- 1 out of 5 kids were solicited for sex on the Internet;
- 1 out of 4 children were sent pictures of people who were naked or having sex;
- 9 out of 10 children aged between eight and 16 have viewed pornography on the Internet. In most cases, the sex sites were accessed unintentionally when a child, often in the process of doing homework, used a seemingly innocent sounding word to search for information or pictures. (London School of Economics January 2002);
- Over \$10-Billion spent on porn annually;
- There are over 2 million known porn sites.

Understanding the concern of the people using Internet at home, MicroWorld has developed eScan 2003 Internet Security Suite, which works as an all in one package for home users. Some of the salient features offered by the product are:

[Intergraph Solutions and IFS form strategic alliance to supply business software to DoD market](#)

[Princeton Softech Announces Expanded Archiving for PeopleSoft Applications, Partner Alliance and PeopleSoft Certification](#)

[FaceTime Offers America Online's AIM Enterprise Gateway Customers Free Migration to FaceTime Solutions](#)

[AND Joins Siebel Alliance Program](#)

[Harte-Hanks Trillium Software redefines how Data Quality is delivered within enterprises](#)

[Daymon Worldwide extracts essential extranet usage analysis with](#)

- Real time antivirus and content scanning,
- Antispam,
- Parental Control,
- Privacy Control,
- Pop Up filters,
- Automatic Daily Internet Updates
- NETBIOS Firewall.

For business houses world wide, Internet is becoming a highly important and dependable resource but a study reveals the following astonishing facts about the use of Internet at office,

- 27% of fortune 500 companies have battled sexual harassment claims from employees for misuse & abuse of corporate email.
- 46% of corporate organization reporting disciplinary action related to sexually suggestive or explicit material.
- 70% of employees admitting to send & receive unclean emails at work.

Corporates are worried about the productivity being adversely affected due to the exposure that Internet offers to the employees at work. eScan 2003 Corporate, which is also a winner Advanced CheckVir certificate after the tests, offers its users at the corporate level a solution to most of their security concerns related to Internet.

[National Grid Transco Selects Business Objects as Global Business Intelligence Standard](#)

eScan Corporate offers almost all the important functions, which a corporate user looks for in a security software but hardly finds them in one package. Some of the salient features of this comprehensive package include:

- Real time security against viruses and malicious content;
- Antispam, to prevent the unsolicited e-mails from choking the network;
- Productivity Control to block the surfing of unwanted websites during work;
- Pop Up filters;
- Privacy control to maintain the security of any confidential documents;
- Management console for remote installation/ un-installation/ maintenance of software;
- Extensive reporting to ensure the complete security of the system;
- NETBIOS Firewall;
- Automatic Daily Internet Updates.

About CheckVir Project

The main purpose of CheckVir project is testing anti-virus products and solutions independently from developers. Starting of this project was supported by the Hungarian Ministry of Education, Research and Development Division (IKTA-00033/2000) and by the Hungarian Ministry of Informatics and Communications (SZT-IS-5/2001/10/321, SZT-IS-14/27).
