MicroWorld receives the VB 100% award yet again- October 2005

Added: (Sat Nov 12 2005)

MicroWorld is proud to announce its latest VB100% award, granted for exceptional results during the October VB 2005 tests , on the Windows 2003 Advance Server comparative review. eScan showed 100% detection rates for all in-the-wild viruses, under all testing criteria. This is the fourth time that eScan has received this award confirming that it is one of the best and most powerful virus protection products.

All MicroWorld products use the same Technology, ensuring consistently high detection rates across all platforms. i.e. based on the MWL technology.

MicroWorld Winsock Layer (MWL) blocks Information Security threats at the Internet Gateway itself, way before they can reach your system. It gave our products (eScan and MailScan) an edge that has seen them being honored with several certifications and awards by some of the most prestigious testing bodies.

So far, MicroWorld remains one of the few antivirus providers with a clean record at Virus Bulletin, after winning the VB100% award every single time it submitted a product for testing at VB.

Read about more reviews, and industry awards and certifications received by MicroWorld products on our site <http://www.mwti.net>.

About the Virus Bulletin 100% award

The Virus Bulletin 100% awards recognize those products best able to detect viruses known to be 'in the wild'. Unlike some other similar-sounding schemes, Virus Bulletin uses the most up-to-date Wild List in its tests. This means that products that are 'up with the game' are the ones most likely to be granted VB 100% awards`
